

Seizure Log

Keep track of your pet's behavior before, during, and after seizures to review with your veterinarian.

To ensure that this log is useful for your veterinarian:

-  **Be detailed in your descriptions.** This may help with diagnosis, medication adjustment, or isolation of the patterns of behavior that signal a seizure.
-  **Record video of the seizures** to accompany this log if you are able. If you would prefer to remain with your pet, you can ask another family member to record if possible.
-  **Monitoring bloodwork and drug level is very important.** Follow your vet's required monitoring schedule, which will help them assess your pet's health and adjust treatment as needed.

Pet Owner Name _____

Pet Name _____

Date of Next Bloodwork _____

Current Dose of Seizure Medication _____

Date	Time seizure began	Time seizure ended	Recovery time	Medication given that day?	Additional notes, observations, and comments
